

MOBILITYCMS

Go mobile.

Connect with your audience like never before.

MobilityCMS is a mobile application platform for businesses, organizations and individuals that are looking to harness the marketing power of the third screen.

One part mobile app, one part CMS, MobilityCMS combines a custom app, designed around your unique brand requirements, with a web-based content management system allowing you to update your app in real time.

Audiences are no longer waiting on the sidelines to receive neatly packaged messages. They need and want to be reached in a way that is real and relevant to them, through content that is interactive.

Features

Apps should be dynamic, not static. Static apps get deleted. All features have been developed to push content to audiences, keeping you connected and them engaged.

Home Screen + App Icon

Custom branding developed according to your requirements.

Photos

Add images of speaking engagements, events and of course, yourself.

Videos

Integrate YouTube videos of interviews, ads or processes that play right in your app.

Shop

Promote and sell your products, services or solutions right from your app.

Files

Include PDFs of brochures, white papers, articles and case studies.

Audio

Upload podcasts, interviews, messages or any audio file you want to share.

Twitter Integration

Integrate your twitter feed.

News

Post press releases and announcements.

Email Sign up

Build your database and increase inquiries with an integrated contact form.

Blog Feed

Integrate your blog, allowing audiences to view it via mobile.

Bio

Manage your info and add phone, email and web contacts and links.

Events

Add events, product launches or release dates.
